

ADARSH MOHAN

Tempe, AZ - +1 (602) 339-5245 - amohan78@asu.edu - linkedin.com/in/adarshm0han - github.com/adarshm0han - adarshm0han.github.io

Education

Arizona State University, Tempe, AZ - M.S. Computer Science

December 2026 - GPA: 3.85/4.0

Relevant Coursework: Algorithms, Cloud Computing, Data Processing at Scale, Statistical ML, NLP, Software Testing

Manipal Institute of Technology, India - B.Tech EEE, Minor in Data Science

May 2023 - CGPA: 7.46/10

Professional Experience

Foresight Industries Inc., Remote, USA

May 2026 - Present

AI Engineering Intern

- Delivered production medical claims workflows with TypeScript, React, Claude Code, PostgreSQL, and AWS handling 500+ claims in production; shipped changes through Agile sprints and Git/GitHub code reviews.
- Pioneered an LLM-assisted denied-claim appeal workflow grounded in denial reasons, payer policies, and clinical evidence, using Amazon Bedrock and strict guardrails to reduce unsupported AI output.
- Designed PostgreSQL-backed RESTful denial-trend APIs to flag emerging systemic patterns early; shipped via CI/CD so teams could fix root causes upstream.
- Architected a PHI-safe Node.js REST API and React/Tailwind CSS UI across 7 claim stages and 6+ data sources, accelerating investigations and next-action visibility.
- Engineered a verifiable MCG-to-DNF pipeline across 13 guideline sources, producing 12 decision trees with 15 automated tests, provenance, and quality checks.

Genpact, Kolkata, India

December 2023 - January 2025

Senior Associate - Data Engineer

- Reconciled ETL workflows with SQL, DBeaver, and hash checks for 12 SOX reports, automating end-user notifications to support reliable recurring compliance reporting.
- Refactored 2 SQL UDFs with cross-functional teams to correct data retrieval and restore accurate ETL validation-dashboard outputs for SOX reporting.
- Diagnosed 2 critical Talend production defects, monitored recurring jobs, and leveraged TAC/SQL to resolve 7 tickets through root-cause analysis.
- Administered schema-level IAM controls and SOX access reviews across governed datasets, enforcing least-privilege access and maintaining audit readiness.

CasaMed, Bengaluru, India

January 2023 - August 2023

AI/ML Engineering Intern

- Configured 13 ML Kit/Firebase pose-detection models and optimized 42 physiotherapy models across 12 skeletal joints for real-time rep counting and posture precision.
- Extended the Python chatbot with Spacy NER across 16 pain-point labels, converting free-text input into structured signals for physiotherapy assistance.

Projects

Elastic Face Recognition on AWS

- Developed an elastic face-recognition pipeline with AWS EC2, S3, SQS, DynamoDB, AMIs, and Elastic IP.
- Processed 100/100 requests correctly at 0.67-0.70 s cold and 0.46-0.54 s warm-cache response times.
- Devised a queue-driven controller scaling the application tier from 0 to 15 EC2 instances and back to 0 in 0.15-0.23 s.

MA-Rank (Multi-Agent Resume Screening)

- Designed a multi-agent screening system that replaces keyword-only matching with explainable JD-to-resume ranking, normalizing skills and storing structured evidence in Neo4j.
- Orchestrated five agents to rank 500 resumes across 1,534 jobs while surfacing matched/missing skills, evidence, uncertainty, and review flags.
- Stress-tested ranking sensitivity: when skill coverage fell from 40% to 20%, a candidate moved from rank 1 to 7 and uncertainty rose from medium to high; **App**: ma-rank.streamlit.app.

WebSecArena (Web Agent Security)

- Created a BrowserGym/AgentLab benchmark covering 6 web attacks, 12 agents, and 3 LLMs; ran 2,160 trials scored by attack success, safe task success, and disruption rates.
- Measured defense gains: few-shot prompting cut Llama phishing ASR from 90% to 20% and prompt-injection ASR from 90% to 43%.

Federated Learning / Edge Computing on AWS

- Developed a 10-worker Python/PyTorch federated-learning system with EC2, Lambda, and S3 across 5 distributed training rounds.
- Deployed Greengrass/MQTT on 9 EC2 nodes plus a Raspberry Pi; achieved 94.28% final accuracy in a validated end-to-end run.

Technical Skills & Publications

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS, C++

Frontend / Backend: React, Next.js, Node.js, Flask, RESTful APIs, PostgreSQL, Tailwind CSS

AI / Agentic: Claude Code, OpenAI Codex, Cursor, LangGraph, LangChain, LLMs, RAG, Hugging Face, PyTorch

Cloud / DevOps: AWS, Docker, Kubernetes, Kafka, Linux, Git/GitHub, CI/CD, Agile

Testing / Data: Pytest, Playwright, Neo4j, Pandas, NumPy, DBeaver

Publication: Privacy-Preserving Epileptic Seizure Detection Using Federated Deep Learning [Link]
